HAZARD EVALUATION OF SUBSTANCES TRANSPORTED BY SHIPS

Report of the forty-second session of the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships

The report of the forty-second session of the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships (EHS 42/8) is attached for information.

Any comments would be welcome and should be addressed to:

IMO Technical Secretary of the GESAMP/EHS Working Group
Marine Environment Division

IMO

E

WORKING GROUP ON THE
EVALUATION OF THE HAZARDS OF
HARMFUL SUBSTANCES CARRIED BY
SHIPS
42nd session
Agenda item 8

EHS 42/8
1 March 2006
ENGLISH ONLY

REPORT OF THE FORTY-SECOND SESSION

1 INTRODUCTION

1.1 The forty-second session of the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships was held at IMO Headquarters, London, from 20 to 24 February 2006 under the chairmanship of Dr. C.T. Bowmer. The list of members attending this session is shown in annex 1 and the approved agenda is shown in annex 2.

1.2 It was noted that the fifty-third session of the Marine Environment Protection Committee (MEPC) was held from 18-22 July October 2005 and, following instruction by MEPC 53, the GESAMP Reports and Studies No. 64 and the GESAMP/EHS Product Data Reporting Form had been placed on the IMO public domain website to facilitate easy access by industry.

1.3 The Working Group was informed that the Director of the IMO Marine Environment Division, in his capacity as the Administrative Secretary of GESAMP, had organized a meeting of representatives of the GESAMP sponsoring organizations to discuss the GESAMP review process in June 2005. The meeting concluded that:

- .1 the GESAMP mechanism and its future should not be linked to the Regular Process for global reporting and assessment of the state of the marine environment, formerly known as the "GMA-Process, and that GESAMP should continue irrespective of the decision on the Regular Process; and
- .2 with the exception of WHO and UNEP, the sponsoring organizations (UN, WMO, FAO, IAEA, IMO, UNIDO and UNESCO-IOC) supported the continuation of GESAMP, recognizing that the restructuring and financing of the new GESAMP were inter-related issues.

1.4 By way of follow-up action, on 22 September 2005 a meeting of the GESAMP Secretariat was convened to address the structuring and financing of the 'new GESAMP' and a further meeting was held from 27 February to 1 March 2006 to develop a programme of work for GESAMP, based on its mission statement and the strategic vision reflected in the 'new GESAMP', as well as the relevant financial arrangements. In this regard, the Working Group was informed of the agreement with the Swedish Government to provide funding for GESAMP to support the delivery of capacity building in marine sciences under the GESAMP umbrella.

For reasons of economy, this document is printed in a limited number. Delegates are kindly asked to bring their copies to meetings and not to request additional copies.

1.5 The Group was informed that MEPC 53 had agreed that a dedicated GESAMP-Ballast Water Working Group on Active Substances (GESAMP-BWWG) should be established for the approval of a ballast water management system using active substances, which would be financed through a fee scheme paid by industry.

1.6 The first meeting of the GESAMP-BWWG was convened from 23 to 27 January 2006. The GESAMP-BWWG developed methodologies and assessed the information to be supplied by industry to enable it to conduct its work. In addition, it reviewed two proposals for the approval of Active Substances in accordance with the terms of reference approved by MEPC 53 and accepted by the GESAMP Inter-Secretariat. The report on the outcome of the GESAMP-BWWG was reviewed by GESAMP on 17 February 2006 and will be submitted to MEPC 54 (20 to 24 March 2006) for its consideration.

1.7 The Working Group took note of the progress made on the revised MARPOL Annex III, which is expected to enter into force on 1 January 2010 and, in particular, noted that the Appendix on the identification of harmful substances in packaged form in the revised Annex III will be based on the criteria developed by the UN GHS.

2 OUTCOME OF THE *AD HOC* SUB-GROUP MEETING ON THE EVALUATION OF AQUATIC TOXICITY HAZARDS

2.1 The Group noted that the *ad hoc* (intersessional) meeting of the Aquatic Toxicology Sub-Group was held from 15 to 18 November 2005, generously funded by the Japanese Environment Ministry and hosted by the Shukutoko University, Tokyo. The report of the meeting was distributed to the Group as document EHS S7.

2.2 It was noted that the Sub-Group generated revised GESAMP Hazard Profiles for 59 products subject to the IBC Code, a number of which appear in the list of products omitted from the Code due to missing pollution/safety data or both, the results of which are included in annexes 3 and 4 respectively.

2.3 It was also noted that the Sub-Group had considered the groups of phthalates and adipates and were able to generate those parts of the hazard profiles related to aquatic toxicity based on information received from industry or by read-across. In so doing, the following hazard profiles which appeared in the list of products omitted from the revised IBC Code due to missing pollution and/or safety data were now complete:

- .1 Dinonyl phthalate;
- .2 Ditridecyl phthalate;
- .3 Diisonyl adipate; and
- .4 Ditridecyl adipate.

2.4 Noting that Di-n-hexyl adipate did not follow the trend of other adipates with regard to biodegradation, the Group agreed to retain the current profile for the product and to look into the matter at a later date.

2.5 The Sub-Group recalled that following completion of the hazard profile for pyrolysis gasoline, ESPH 11 had commented on the variability of the product. The Sub-Group noted that the hazard profile was based on compositional information provided at BLG 5 and that the

ESPH Working Group had agreed to defer its decision on the classification and assignment of the carriage requirements of pyrolysis gasoline until BLG 10 (3 to 7 April 2006), since more recent compositional information was to be made available.

2.6 Having considered this decision and in order to facilitate discussion at the next ESPH meeting, the Sub-Group recalled that originally a worse case rating was assigned to the product. Following re-examination of the compositional information presented at BLG 5, the Sub-Group re-evaluated the product using existing hazard profiles for each component proportionally and, using a weighted average approach based on the main components, assigned a new profile. During re-evaluation of the product, the Sub-Group noted that the greater the concentration of aliphatic compounds (predominately C8), the more toxic the product to marine organisms.

2.7 Having noted the Sub-Group's discussions, the Group agreed to adjust the profile for pyrolysis gasoline as shown in annexes 3 and 4.

2.8 The Group noted the consideration given by the Sub-Group to "polyols", following the receipt of aquatic toxicity data and information on the groupings and naming of these substances from industry, and agreed to take this information into account when discussing these products under agenda item 5.

2.9 Similarly, the Group agreed to consider under agenda item 3, the results of the deliberations and proposals by the Sub-Group on vegetable oils and their derivatives, as well as the issue of vegetable oil synonyms.

3 EVALUATION OF NEW SUBSTANCES PROPOSED FOR BULK TRANSPORT BY SHIPS

3.1 The Group considered the following new substances which had been submitted for evaluation by industry and Governments:

- .1 Acetonitrile (low purity grade);
- .2 Alkylbenzene distillation bottoms;
- .3 Cocoa butter;
- .4 Crude piperazine;
- .5 Dialkyl (C9-C10) phthalates;
- .6 Fatty acid methyl esters;
- .7 Hydrogenated starch hydrolysate;
- .8 Jeffamine D-230;
- .9 Jeffamine HK-511;
- .10 Maltitol syrup;
- .11 *N*-Methylaniline;
- .12 Molytrimer IDN 1111;
- .13 Potassium chloride brine
- .14 Tall oil, crude;
- .15 Tall oil pitch; and
- .16 Vegetable oils/derivatives including vegetable oil synonyms.

3.2 The resultant hazard profiles for these products are shown in annex 3.

3.3 In considering the various products, the Group agreed that for:

- .1 Dialkyl (C9-C10) phthalates, due to time constraints, the evaluation will be completed at its next meeting;
- .2 Jeffamine D-230, Jeffamine HK-511 and Molytrimer IDN 1111, a proper shipping name would be required and requested the Technical Secretary to liaise with the manufacturers in this regard;
- .3 Potassium chloride brine, the existing hazard profile for potassium chloride should apply. Similarly, the profile should also apply to the product, potassium chloride solution (10% or more), which appears in the list of products omitted from the revised IBC Code due to missing data (see annex 4); and
- .4 *N*-Methylaniline, which is not currently shipped in bulk, the manufacturer requested its evaluation since it may be shipped in the future.

3.4 The Group requested the Technical Secretary to contact those manufacturers from whom additional information may be needed to complete the hazard profiles.

Fatty Acid Methyl Esters

3.5 The APAG Sector Group of CEFIC had requested the Group to evaluate fatty acid methyl ester (FAME). Several requests had also been received to evaluate the hazard of specific FAME products under the name of their plant of origin. The Group considered that if FAME could be evaluated as a generic entry then all other potential FAME products could be dealt with, regardless of origin.

3.6 The Group began to develop a profile for FAME containing C6 to C18 methyl esters. However, it became apparent that the short-chained methyl esters were more harmful than the longer-chained ones, e.g. as in the case of eye irritation. It was, therefore, decided to develop the following two profiles:

- .1 Fatty acid methyl esters as requested by APAG; and
- .2 Fatty acid methyl esters (C14+) to cover the less corrosive/irritating long chain products;

	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
Fatty acid methyl ester (EHS No.2362)	0	NI	0	R	2	NI	Ni	NI	NI	NI	NI		NI	Fp	NI
Fatty acid methyl ester C14+ (EHS No.2354)	0	NI	0	R	2	NI	0	(0)	(2)	2	1		NI	Fp	2

and to retain the following three profiles since they already existed as entries in the 1998 edition of the IBC Code:

- .3 Coconut fatty acid methyl esters;
- .4 Palm oil fatty acid methyl ester; and
- .5 Rapeseed oil fatty methyl esters.

Vegetable oils/derivatives

3.7 The Group noted that a number of vegetable oils and, in particular, derivatives had been submitted for evaluation. In view of the numerous submissions and the fact that some of these products could be covered by existing entries, the Group felt that consolidation of fatty acids, nitriles, alcohols and methyl esters into representative groupings would facilitate the evaluation of these products in the future. The Group carried out an inventory of the many vegetable oils and derivatives recently submitted, which is set out at annex 5, and agreed to carry out the evaluation of these products and to consolidate them into groupings at its next meeting.

3.8 The Group agreed that with regard to the submissions on genetically modified vegetable oils, i.e. soyabean oil, sunflower-seed oil and rapeseed oil, genetically modified vegetable oils could be considered as synonyms of the base vegetable oils, and that there was no need to generate separate entries in the Composite List of Hazard Profiles.

Vegetable oil synonyms

3.9 The Group noted that, at the request of the ESPH Working Group, a number of new synonyms for vegetable oils which had already been evaluated had been submitted for approval. The Group reiterated its view, expressed at EHS 41, that it could not check the identity of synonyms associated with vegetable oils as requested by ESPH 10 and ESPH 11 as this information was primarily restricted to the specific commercial trade of vegetable oils and some synonyms appear to be intended for Customs use or other regulatory purposes. The Group confirmed its view that the onus for providing correct synonyms to IMO rests with the industry submitting the data.

4 CORRESPONDENCE WITH THE INDUSTRY AND CONSIDERATION OF QUERIES FROM INDUSTRY RELATED TO EVALUATIONS

4.1 The Group noted that additional information on the following products had been received from industry with a request that it be taken into account when evaluating the products.

Alcohols (C12-C13) linear and alcohols (C14-C18) linear

4.2 Following a proposal by industry to have the following three alcohol entries:

- .1 Alcohols(C₈-C₁₁);
- .2 Alcohols(C₁₂-C₁₃)linear;
- .3 Alcohols(C₁₄-C₁₈) linear;

identified with the descriptors “linear and essentially linear primary alcohol”, the Group agreed to the following descriptors which, in its view, brought them in line with the original proposals submitted for consideration at EHS 41, and at the same time made them easier to locate in an alphabetical listing such as the Composite List of Hazard Profiles:

- .1 Alcohols (C₈-C₁₁), primary, linear and essentially linear;
- .2 Alcohols (C₁₂-C₁₃), primary, linear and essentially linear;
- .3 Alcohols (C₁₄-C₁₈), primary, linear and essentially linear.

4.3 The Group considered the A1 ratings for these alcohol entries and took into account information submitted by industry derived from the Canadian EPA PBT Screening Project. On the basis of this information and in particular the measured BCF data put forward by industry, the Group agreed to the following ratings for the three groupings: A1: 2; A1a: 5; A1b:2.

Blend TN-100

4.4 The Group noted that this product was assigned a complete hazard profile at EHS 41. The Group further noted that correspondence from the manufacturer indicated that the suggested change of name from Blend TN-100 to alkylbenzene mixtures (containing at least 50% of toluene) had been accepted. The Group considered additional information provided by industry and agreed that for inhalation toxicity, a value of 8800ppm for a 4hr exposure based on toluene (quoting Clayton and Clayton;1983) was not considered a suitable analogy for the product and hence retained the original rating of (2) in column C3, assigned at EHS 41. Similarly, it was agreed to retain the original ratings FE and 2 in columns E2 and E3. The Group requested the Technical Secretary to find out from the manufacturer how this product differs from pyegas or steam cracked naphtha.

N-[3-Chloro(2-hydroxypropyl)]trimethylammonium chloride solution (75% or less)

4.5 The Group recalled that at EHS 40, it had declined to give a rating under column B1 for this product. Past experience had led the Group to expect quaternary ammonium compounds to be toxic, and it had made a request to industry to provide information on marine aquatic toxicity studies. The Group noted that, based on test reports received from industry, the Sub-Group meeting in Japan had agreed to assign a rating of 1 in column B1 and confirmed this rating.

Coatex M 1083

4.6 The Group were informed that the manufacturers agreed to the suggested change of name to polyacrylic acid solution (40%). The Group were further informed that since it had last met, the product had been submitted to the eleventh session of the ESPH Working Group for classification under the IBC Code as its profile had been completed by EHS 41. The ESPH Working Group had agreed to the name polyacrylic acid solution (40% or less) for shipping purposes.

4.7 The Group were also informed that the manufacturers had responded to the request from the mammalian toxicologists to supply a copy of the BIBRA Toxicity Profile to which the manufacturers had referred in their original proposal.

2,2-Dimethylpropane-1,3-diol (molten or solution)

4.8 The Group, having noted the query raised at ESPH 11 concerning the rating assigned to column E2 of Fp, noted that the product is a solid with melting point of 31°C. However, information also indicated that the commercial product is carried as a solution (10% water) and hence the Group agreed to change the rating for the E2 column from Fp to FD.

Distilled Resin Oil

4.9 As the hazard profile for this substance had been completed at EHS 41, no request was made for further information. However, the Group noted that the manufacturer had provided additional information, stating that the product reacts with air to cause a potentially hazardous situation by virtue of its flash point of 45°C; that the water reactivity potential is low; that no inhibitor is necessary to prevent a hazardous reaction; and that no refrigeration is necessary to prevent a hazardous reaction. Whilst welcoming this additional information, the Group agreed to retain the hazard profile assigned at EHS 41.

Dodecylamine/tetradecylamine mixture and Dodecyl-, Tetradecyl-, Hexadecyl-dimethylamine mixture

4.10 The Group noted the comments by industry on the A1 ratings of 5 assigned on the basis of the log Pow to Dodecylamine/Tetradecylamine mixture and to the Dodecyl, Tetradecyl, Hexadecyl-dimethylamine mixture (listed as Alkyl (C12+) dimethylamine in the IBC Code), which appear in annex 4 of EHS 41/9.

4.11 The Group did not dispute the arguments presented by industry regarding the lack of transfer of long chain alkyl amines across cell membranes due to ionic charge at environmental pHs. Likewise, arguments such as the metabolism of long alkyl chain structures, which would reduce bioaccumulation, were also accepted. However, the Group had no means of assigning a rating for A1b on this basis. As there are no ratings in A1b to overwrite the ratings in A1a, the rating for A1 had to be based on A1a. The Group recalled that it had not used calculated BCF values in the past. The alternative given in GESAMP Reports & Studies 64 is to provide measured BCF data in this case for at least one of the significant members of this group - this would increase confidence in assigning a lower bioaccumulation rating in the future.

Ethoxylated tallow amine, glycol mixture

4.12 The Group noted the complex history of this product and the various data and information it had received over the years, including the most recent information provided by the manufacturer. It recalled that various entries had been considered with specific amine cut-offs for inclusion in the Composite List of Hazard Profiles. Based on a comprehensive review of the data, the Group were able to complete the hazard profile and were confident that the profile assigned would cover all concentrations of the amine in the product.

Lecithin (soyabean)

4.13 Whilst noting that EHS 41 had completed the profile for this product and subsequently ESPH 11 had classified it under the revised IBC Code, the Group revisited the hazard profile of this product on the basis of information on biodegradation received from industry and confirmed the rating of R in column A2.

Microsilica slurry [Silica slurry]

4.14 The Group noted that the data provided by industry confirmed the original ratings.

Oxygenated aliphatic hydrocarbon mixture

4.15 The Group confirmed the ratings of 1 in columns D1 and D2 and changed the rating in column C3 from (0) to (1), using the rationale for estimating inhalation toxicity developed at EHS 41.

Shea butter

4.16 The Group took note of the information received from the manufacturer on the detailed composition of crude shea butter as well as the exchange of correspondence with the manufacturer regarding the testing of the substance for biodegradation. The Group agreed to retain the profile as agreed at EHS 41 pending receipt of the test results, noting that for transport purposes, IMO could provide a worse case of an “NR” rating in A2 in any case.

5 RE-EVALUATION OF THE PRODUCTS IN THE IBC CODE WITH MISSING POLLUTION AND/OR SAFETY DATA

5.1 The Group recalled that following publication by IMO of the list of products (MSC/Circ.1128 - MEPC/Circ.423) omitted from the amended IBC Code due to missing safety/pollution data or both, it had completed a number of profiles of products from the list (EHS 41/9 paragraphs 6.1 to 6.4 and annex 7), and that ESPH 11 had assigned appropriate pollution category, ship type and carriage requirements.

5.2 The Group also recalled that following the *ad hoc* (intersessional) meeting of the Aquatic Toxicology Sub-Group, held in Japan from 15 to 18 November 2005, additional product profiles had been completed. The IMO’s Assembly (21 November to 2 December 2005) had requested the IMO Secretariat to prepare an updated list of products with missing safety/pollution data or both, which was published for information purposes and annexed to the report of the Technical Committee to the Plenary. Subsequently, this list was made available on IMO’s public domain website.

5.3 The Group was informed by the Technical Secretary, that during IMO’s Assembly an article had appeared in Lloyds List entitled “Chemical code will act as litmus test for what can be carried by sea”, which underlined the need for manufacturers of these products to supply the missing data as soon as possible.

5.4 In this context, the Group noted that, in the period prior to the deadline of 31 December 2005, set by IMO, substantial additional data had been received from industry which enabled the hazard profiles of a number of products in the list of products omitted from the amended IBC Code to be completed (see annex 4).

5.5 The Group also noted that the information received could be categorized into:

- .1 information received on substances which still have missing data;
- .2 information received on substances which have a complete profile as a result of the work of the *ad hoc* (intersessional) meeting of the Aquatic Toxicology Sub-Group in Japan November 2005;

- .3 information received on substances which have a complete profile as a result of the work carried out by EHS 41 and which have subsequently been classified under the revised IBC Code by ESPH 11 in October 2005; and
- .4 information received on one substance in the amended IBC Code.

5.6 In view of the fact that the deadline for the receipt of information from industry was the 31 December 2005, the Group felt compelled to consider all data received by the deadline and revisited those profiles which had been completed before that date.

5.7 The Group noted that most of the information received had, in fact, resided with industry for quite some time, and that it could have been provided earlier in response to the numerous requests from IMO to the industry to supply the missing data.

Diethylene glycol phthalate

5.8 Having completed the profile on diethylene glycol phthalate, the Group requested the Technical Secretary to draw the attention of IMO to the fact that whereas its evaluation was based on the structure of a single moiety, the information indicated that the product shipped was in oligomeric form and hence, the product name was not a true reflection of the product shipped.

Polyethylene polyamines

5.9 Information received from different manufacturers under the name polyethylene polyamines was divided into two groups: one contained more than 50% paraffin (C5-C20), whilst the other referred to the substance itself.

5.10 The Group's toxicologists noted that both products were mixtures of different polyethylene polyamines and that the composition of both differed significantly. It was decided to issue one profile reflecting the hazards as appropriate in each column, under which both substances could be carried. It was noted that the rating in A1 is based on the paraffin solvent. Should manufacturers require separate entries, the Group were of the opinion that appropriate names and supporting data would have to be provided.

Polyols

5.11 The Group recalled that the evaluation of polyols had proceeded slowly over the years on the basis of information provided by industry regarding the appropriate grouping and naming of these products. Following the receipt of new information from industry on specific polyols, the Group carried out the following inventory of the entries it had evaluated over time and assigned ratings, as appropriate:

Polyether Polyols																
Polypropylene glycol																
EHS No.	CAS No.	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
1159	25322-69-4	0	NI	0	(NR)	1	NI	1	0	(1)	1	1		NI	D	1
Glycerol propoxylated																
EHS No.	CAS No.	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
2346	25791-96-2	0	NI	0	NR	1	NI	1	0	(2)	1	0		NI	D	0
Glycerol propoxylated and ethoxylated																
EHS No.	CAS No.	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
2276	9082-00-2	0	NI	0	NR	3	0	(1)	0	(2)	1	1		NI	SD	0
Glycerol ethoxylated (new entry)																
EHS No.	CAS No.	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
2360	31694-55-0	0	NI	0	(NR)	0	NI	NI	NI	NI	NI	NI		NI	NI	NI
Trimethylol propane propoxylated																
EHS No.	CAS No.	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
2274	25723-16-4	0	NI	0	(NR)	1	0	0	0	(1)	0	1		NI	NI	NI
Blend of glycerol/sucrose propoxylated and ethoxylated (new entry)																
EHS No.	CAS No.	A1A	A1B	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
2361	117847-97-2	0	NI	0	(NR)	(3)	(0)	NI	NI	NI	NI	NI		NI	NI	NI
Polyalkylene oxide polyols						See paragraph 5.12 below.										
Polyether (molecular weight 2000+)						See paragraph 5.12 below.										
Glycerol polyalkoxylate						See paragraph 5.12 below.										

5.12 The Group noted that the products: polyalkylene oxide polyols, polyether (molecular weight 2000+), and glycerol polyalkoxylate, were contained in the IBC Code as well as in the list of products omitted from the IBC Code due to missing data. These descriptors are so broad as to allow almost any polyol to be carried under each entry. As a result, the Group only evaluated the new data and the individual entries for which a clear molecular structure and hazard data was provided.

5.13 The above ratings show that all entries are considered not to bioaccumulate, and not to be readily biodegradable (as indicated in the submission, they are probably inherently biodegradable). The above substances are not restricted by a descriptor of molecular weight. Test data indicate that some lower molecular weight grades (MW <1000) may be readily biodegradable, but higher molecular weight and less biodegradable grades can be carried under these entries. As a result, an NR in brackets had been given to even those substances with ready biodegradability data, as well as

to those for which no data has been provided. The acute aquatic toxicity is not always the same and the further use of grouped names may prove difficult.

5.14 Glycerol propoxylated and ethoxylated was used as an analogy to provide ratings for the “Blend of glycerol/sucrose propoxylated and ethoxylated”.

5.15 The Group recognized that further work was required on this set of products and agreed to continue this work at its next session.

6 ANY OTHER BUSINESS

Publication of the GESAMP/EHS Composite List of Hazard Profiles

6.1 The Group recalled that at EHS 41 it had noted the demand from different stakeholders for the GESAMP/EHS Composite List of Hazard Profiles. It agreed that it would be useful to publish a list of substances and their associated hazard profiles which have been evaluated on the basis of the revised GESAMP Hazard Evaluation Procedure, and that the Composite List of Hazard Profiles should be made available on the Internet.

6.2 Furthermore, the Group noted that the eleventh session of the ESPH Working Group recognized the need to publish the GESAMP/EHS Composite List of Hazard Profiles in view of its use in the provisional assessment of liquid substances transported in bulk (MEPC/Circ.265 as revised), and requested the Secretariat to publish the List using their IBC Code product names, where applicable, and their associated hazard profiles, if possible, by the end of the 2005. However, the Group was informed by the Technical Secretary that in view of the *ad hoc* intersessional meeting of the Aquatic Toxicology Sub-Group in November 2005, closely followed by the main Working Group meeting, he thought it best that the results of both these meetings should be reflected in the Composite List of Hazard Profiles as this would ensure that the information is as complete as possible.

6.3 The Group considered that the Composite List, featuring the hazard profiles, was substantially complete but that some gaps in hazard profiles still require attention.

6.4 The Group recalled that at EHS 40, 41 and 42 it had, upon request of IMO, focussed mainly on substances with incomplete profiles and that due to time constraints had refrained from continuing the regular process of cross checking ratings of chemicals even though it was felt that in the interests of data integrity and the accuracy of the ratings this exercise was necessary and should be completed in the future.

6.5 Following the work carried out individually by some members of the Group to review the Composite List of Hazard Profiles for gaps and omissions in hazard profiles and CAS numbers, the Group agreed to publish the Composite List as part of the main report of the meeting (see annex 3).

Submission of data to the GESAMP/EHS Working Group and IMO

6.6 The Group, once again, drew the attention of industry to the procedure following submission of a new product to the GESAMP/EHS Working Group. Submission to the GESAMP/EHS Working Group is the first step in the classification of a product under the IBC Code and once the product has a complete profile, it should be submitted to the IMO for the assignment of pollution category, ship type and carriage requirements under the IBC Code. Manufacturers should contact their national Administration or the appropriate non-governmental organizations in consultative status with IMO for guidance if they are not familiar with the process. More information on the process can be found at <http://www.imo.org>: click on *marine environment*: click on *chemical reporting forms*.

OECD on aquatic environmental hazards

6.7 The Group noted the draft summary record of the OECD Expert Group Meeting on Aquatic Environmental Hazards (31 January to 1 February 2006, Arlington, Virginia, United States), which considered the further development of a system for applying chronic aquatic toxicity data as part of the GHS. The Group further noted that the 1 mg/L cut-off value for “no observed effect concentration (NOEC)” and the system of using surrogate data, as used by IMO in the revised Annex II of MARPOL and amended IBC code (for assigning Pollution Category and Ship Type respectively), had been retained as part of the proposed system. Furthermore, this system included high cut-off values (not used by IMO) for chronic aquatic toxicity in combination with ready biodegradability. The Group expressed its concern that, from a scientific point of view, as mentioned in GESAMP Reports and Studies No. 64, 2002, chronic toxicity was a stand-alone criterion and that combining it with other criteria such as biodegradability ventured into the area of risk assessment.

Expression of appreciation

6.8 The Chairman informed the Group that Professor Meiko Wakabayashi was unable to attend the meeting. The Group expressed its gratitude for her contribution to making the Aquatic Toxicology Sub-Group held in Japan from 15 to 18 November 2005 a success.

7 FUTURE WORK PROGRAMME AND DATES OF THE FOLLOWING SESSIONS

7.1 The Group noted that, due to time constraints, further work was required to address the following group of existing products:

- .1 fatty acids, alcohols, nitriles and methyl esters;
- .2 vegetable acid oils and distillates;
- .3 polyether polyols;
- .4 correspondence related to missing data for products which were submitted prior to 31 December 2005; and
- .5 dialkyl (C9-C10) phthalates.

7.2 This would have a bearing on the classification of products under the revised IBC Code and would therefore need to be reported to the next intersessional meeting of the ESPH Working Group to be held later this year. **In this regard, the Group felt the necessity of having another meeting in 2006 and, subject to obtaining financial support for holding such a meeting, agreed that the**

date of the next regular meeting of the Group would be from 6 to 8 June 2006. In which case, correspondence related to this meeting covering the topics 7.1.1 to 7.1.5 above should reach the *Technical Secretary of the GESAMP/EHS Working Group not later than 1 May 2006. In the event that no funding is secured, the next regular meeting would be tentatively held from 23 to 27 April 2007. **Submissions for the April 2007 regular meeting should reach the *Technical Secretary of the GESAMP/EHS Working Group not later than 15 March 2007.**

8 CONSIDERATION AND ADOPTION OF THE REPORT

8.1 The Group adopted the report and, having thanked members for the considerable amount of effort, including extensive preparatory work, *inter alia*, the collection, collation and evaluation of data to generate the *Revised Hazard Profiles*, the Chairman closed the session on Friday, 24 February 2006 at 13:00 hrs.

* The Technical Secretary of GESAMP/EHS Working Group
International Maritime Organization (IMO)

ANNEX 1

**LIST OF MEMBERS ATTENDING THE FORTY-SECOND SESSION
OF THE GESAMP/EHS WORKING GROUP**

Dr. C.T. Bowmer (Chairman)

TNO Chemistry
Utrechtseweg 48
PostBox 360
3700 AJ Zeist
The Netherlands

E-mail: bowmer@voeding.tno.nl
Tel: +31 30 6944645
Fax: +31 30 6944099

Mr. F. Pedersen

EPA Chemicals
Strandgade, 29
DK-1401 Copenhagen
Denmark

E-mail: fpe@mst.dk
Tel: + 45 32 660289
Fax: +

Dr. T. Höfer

Federal Institute for Risk Assessment
Thielallee 88-92
D-14195 Berlin
Germany

E-mail: thomas.hoefer@bfr.bund.de
Tel: +49 308 412 3267
Fax: +49 308 412 3685

Dr. D. James

Ty Llwyd
Llanwrda
Carmarthenshire
Wales SA19 8AW

E-mail: derek-a.james@virgin.net
Tel: +44 1550 779034

Dr. M. Marchand

IFREMER
Centre de Nantes
BP 21105
44311-Nantes
France

E-mail: mmarchan@ifremer.fr
Tel: +33 02 4037 4142
Fax: +33 02 4037 4001

Mr. M. Morrissette

President
Dangerous Goods Advisory Council
Suite 740
1100 H Street, NW
Washington, D.C. 20005
United States

E-mail: mmorrissette@dgac.org

ANNEX 2

**AGENDA FOR THE FORTY-SECOND SESSION OF THE
GESAMP/EHS WORKING GROUP**

- 1 Adoption of the agenda
 - Matters arising from IMO and other Organizations relevant to the activities of the Working Group
- 2 Outcome of the *ad hoc* sub-group meeting on the evaluation of aquatic toxicity hazards
- 3 Evaluation of new substances proposed for bulk transport by ships
- 4 Correspondence with the industry and consideration of queries from industry related to evaluations
- 5 Re-evaluation of the products in the IBC Code with missing pollution and/or safety data
- 6 Any other business
- 7 Future work programme and dates of the following sessions
- 8 Consideration and adoption of the report

ANNEX 3 - GESAMP/EHS COMPOSITE LIST

New GESAMP Hazard Profiles

ANNEX 5
INVENTORY OF VEGETABLE OILS AND THEIR DERIVATIVES

<p>Vegetable oils</p> <ol style="list-style-type: none"> 1. Cashew nut shell oil (untreated) 2. Castor oil (containing less than 10% free fatty acids) 3. Cocoa butter 4. Coconut oil (containing less than 5% free fatty acids) 5. Corn oil (containing less than 10% free fatty acids) 6. Cotton seed oil (containing less than 12% free fatty acids) 7. Fish oil (containing less than 10% free fatty acids) 8. Groundnut oil (containing less than 4% free fatty acids) 9. Illipe oil (containing less than 10% free fatty acids) 10. Lard (containing less than 10% free fatty acids) 11. Linseed oil (containing less than 4% free fatty acids) 12. Mango kernel oil (containing less than 10% free fatty acids) 13. Olive oil (containing less than 3.3% free fatty acids) 14. Palm oil (containing less than 15% free fatty acids) 15. Palm olein (containing less than 5% free fatty acids) 16. Palm kernel oil (containing less than 5% free fatty acids) 17. Palm kernel olein (containing less than 5 % free fatty acids) 18. Palm kernel stearin (containing less than 5% free fatty acids) 19. Palm stearin (containing less than 5% free fatty acids) 20. Rapeseed oil (high erucic acid; containing less than 4% free fatty acids) 21. Rapeseed oil (low erucic acid, containing less than 4% free fatty acids) 22. Rice bran oil (containing less than 15% free fatty acids) 23. Safflower oil (containing less than 5% free fatty acids) 24. Shea butter (containing less than 15% free fatty acids) 25. Soyabean oil (containing less than 4% free fatty acids) 26. Sunflower seed oil (containing less than 7% free fatty acids) 27. Tallow (containing less than 15% free fatty acids) 28. Tung oil (containing less than 2.5% free fatty acids) 29. Palm Mid Fraction 30. High FFA Palm Oil 31. Interesterified mixed vegetable oil <p>Genetically modified oils</p> <ol style="list-style-type: none"> 1. Genetically modified soyabean oil 2. Genetically modified Sunflower seed oil 3. Genetically modified Rapeseed oil <p>Acid oils</p> <ol style="list-style-type: none"> 1. Maize (corn) acid oil 2. Mixed acid oil 3. Palm acid oil 	<ol style="list-style-type: none"> 4.
